

Bangladesh Directorate General of Health Services (DGHS) - Cardiovascular Disease Protocol

- Screen for CVD risk factors (hypertension, diabetes, smoking) at NCD corners in Upazila Health Complexes.
- Advise immediate cessation of smoking (Bidi, Cigarette) and smokeless tobacco (Jorda, Gul).
- Reduce consumption of trans fats and saturated fats; promote use of healthier cooking oils in moderation.
- For high-risk individuals, prescribe statins and low-dose aspirin as per national guidelines available at primary care level.
- Ensure prompt referral of suspected acute myocardial infarction (heart attack) cases to secondary or tertiary care facilities equipped with ECG and emergency cardiac medications.
