

Bangladesh Directorate General of Health Services (DGHS) - Diabetes Care Protocol

- Blood glucose screening should be conducted at NCD corners in Upazila Health Complexes.
- Dietary modification is key: reduce intake of white rice and refined sugars; increase intake of vegetables and local lentils (dal).
- Avoid sugary sweets and desserts (mistis) common in local festivals.
- Patients with HbA1c > 7.0% should be initiated on Metformin or other oral hypoglycemic agents available at government facilities.
- Foot care is critical; patients should inspect feet daily to prevent diabetic ulcers.
- Patients should maintain a healthy weight (BMI < 25) through regular physical exercise.
