

Bangladesh Ministry of Health and Family Welfare (MOHFW) - DGHS Hypertension Protocol

- Patients should visit their local Upazila Health Complex (UHC) or NCD corner for initial screening.
- Reduce dietary salt intake, particularly avoiding extra table salt with rice (a common dietary habit in Bangladesh).
- Use local, affordable anti-hypertensive medications available at community clinics (e.g., Amlodipine, Losartan) as prescribed.
- Increase physical activity, such as walking for 30 minutes daily.
- Regular monitoring of blood pressure at community clinics is strongly recommended.
- Tobacco consumption in all forms (smoking and smokeless like Zarda, Gul) must be completely stopped.
